

CASE STUDY

Eagle Green Construction

Project Type:
Residential Driveway

Aspire Pavers Are Beautiful and Tough

Aspire interlocking composite pavers are lightweight, easy to install, and made with up to 95% recycled materials.

“I am so happy with the outcome. I like the appearance and the fact that the driveway enables my family to integrate the surrounding area and match the architecture of our home.”

- ROBERT K (HOMEOWNER)

“Installing Aspire Pavers was a cinch. This was our first Aspire Paver job and if you asked the homeowner I think he will tell you this had to have been our 30th job. We were in and out of here in a week!

– ERIC T (CONTRACTOR)

THE PROBLEM:

Homeowner Robert K. wanted an alternative to the boring asphalt driveway he needed to replace. He also needed a product that could accommodate the curves and angles of his driveway.

THE SOLUTION:

Robert searched the web and found the Aspire Paver System. The website was very helpful in helping decide paver size, colors, and pattern. Next was finding a contractor. Robert went on Angie’s List and selected the best contractor recommended. Eric with Eagle Green Construction called Robert back right away and set up a meeting. After meeting with Eric, Robert gave the go ahead with the project. First was the removal of the old asphalt and stone. Next was fabric, then 8” of road base was installed and compacted 2” at a time. Then screeded the bedding sand with 1” conduits, followed by the Aspire Grids and Pavers.

“It is absolutely stable and solid. It’s a joy for me to come out of the garage and be presented with this appearance.”

– ROBERT K (HOMEOWNER)
